# Documentation Admin Part

Some of the pages or component can be used in the admin part but also in the user part, like: update password, profile picture, holidays.

Home page: When the admin log's in this is the page by default to see.

Description:

- Sidebar Menu with:
    - Account: Settings / Logout
    - Home
    - Settings: Schedule Management / Users / Typical Schedule / Holidays
    - Generate
- Navbar: Logo and Name / User Account
- In the content of the page:
    - Filter by session
    - Display all users
    - Export to CSV or Print
    - Can change the month of the schedule
   - The schedule himself
- Footer: copyright
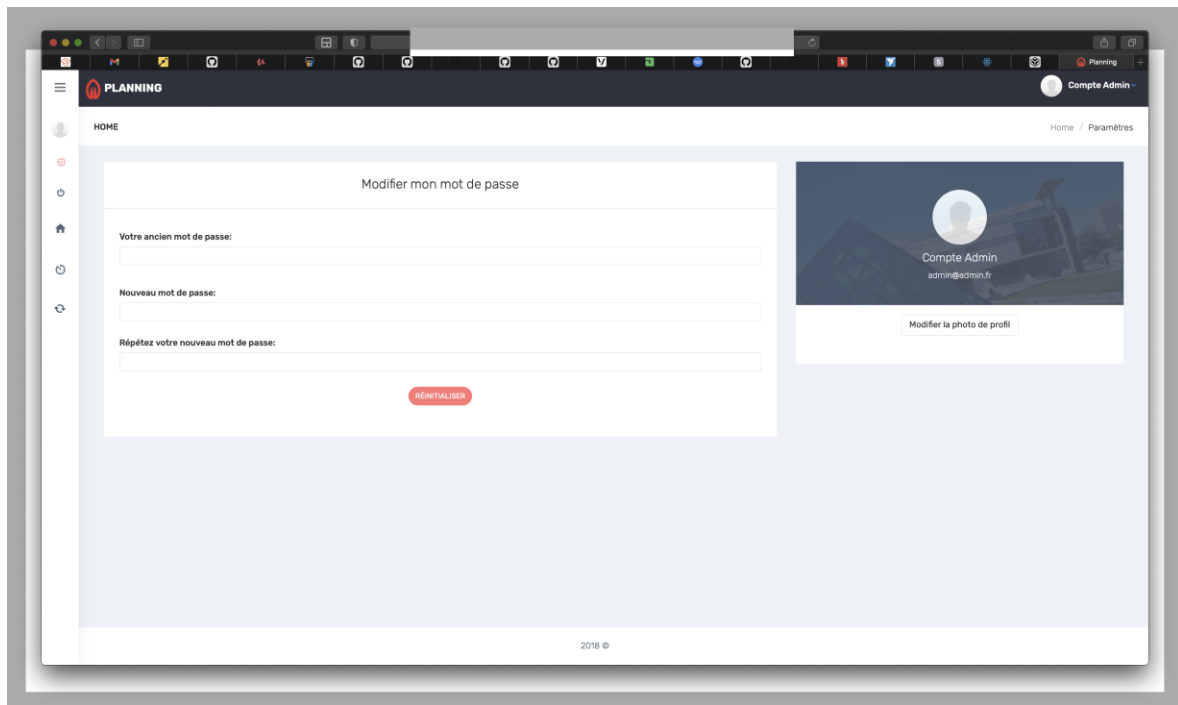

The admin or user can modify is password: Old password / New password / Confirm new password.

Update is profile picture.
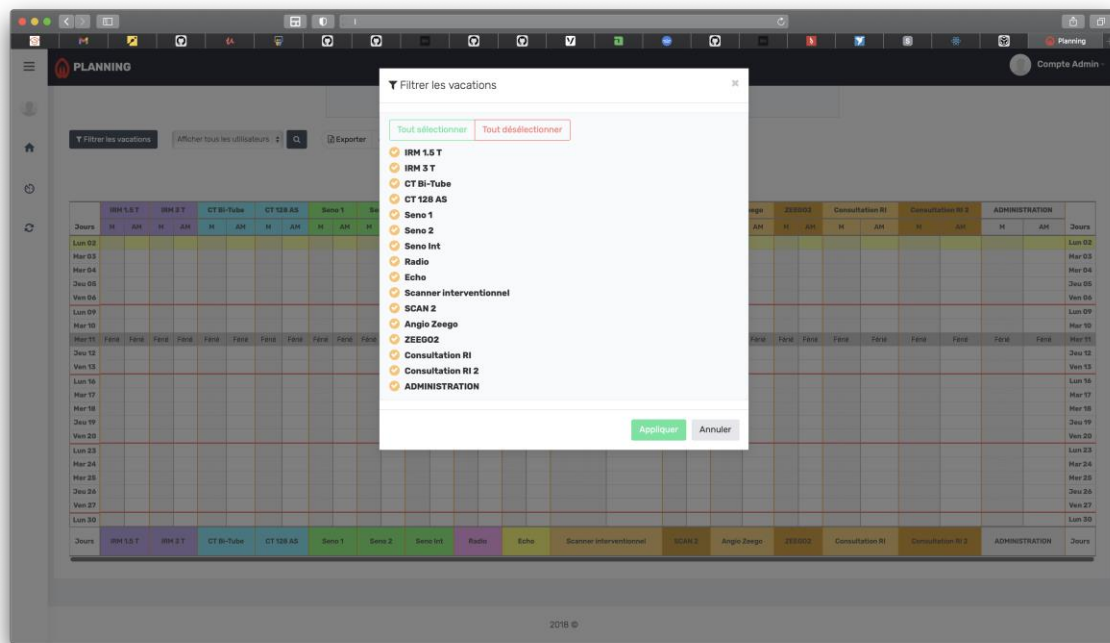

Filter by session modal: either select all or unselect all. Ill provide you the sessions name.
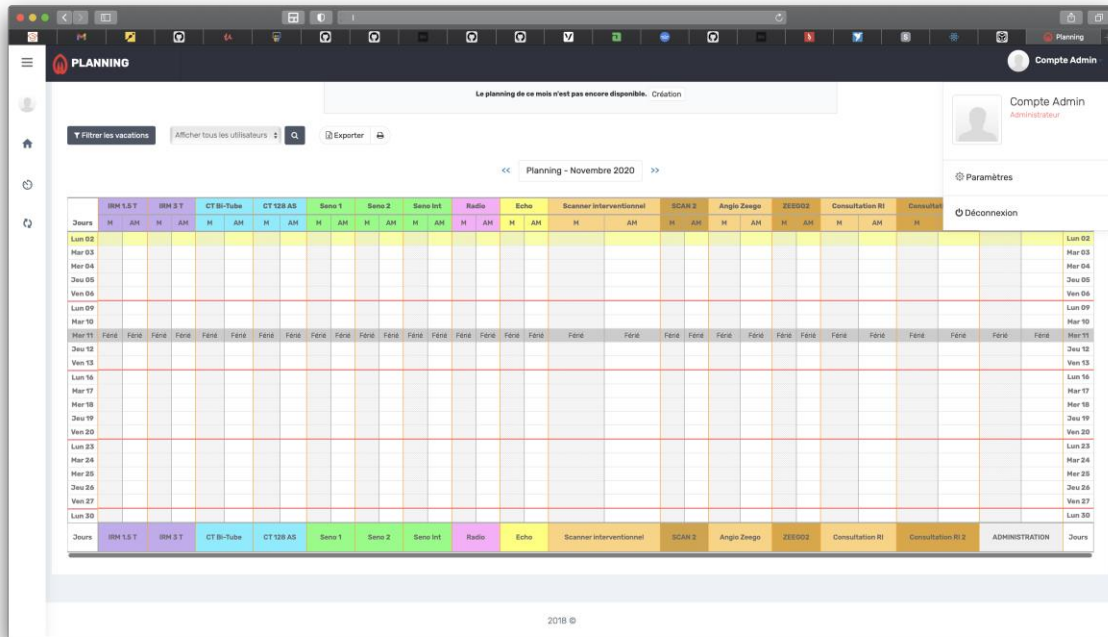

User and admin as the same navbar: so, they can access their profile settings to reset their password or change their profile picture. They can also logout.
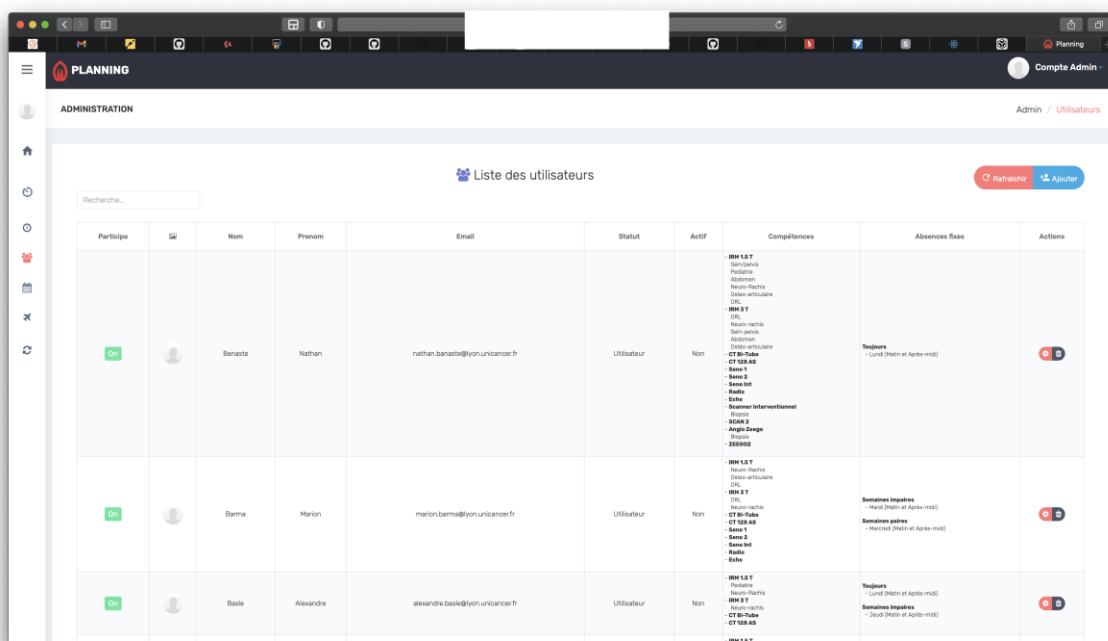

Second page in the Settings Menu.

This is the registered user list; the table needs to contain those columns: Checked / Profile Picture / Last Name / First Name / Email / Role / Active / Skills / Holidays / Actions: delete or modify.

This is the modify profile modal, you can update profile picture / last name / first name / email / phone / cell phone / qualification / holidays.
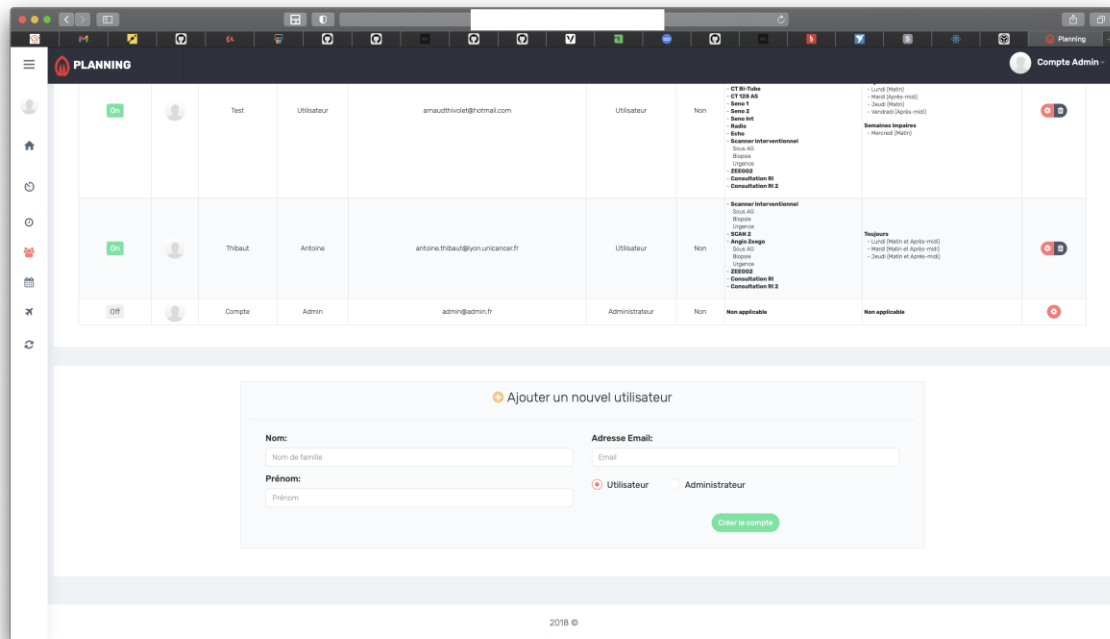

At the bottom of the user's page, you can create a new one by typing: a last name / first name / email and role (user or admin).

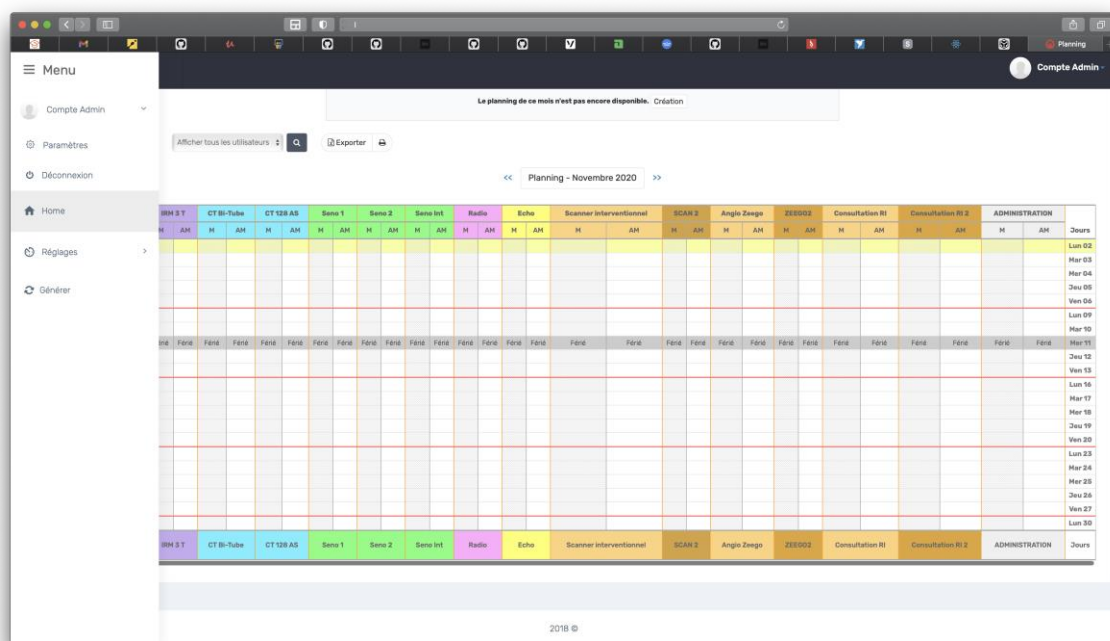

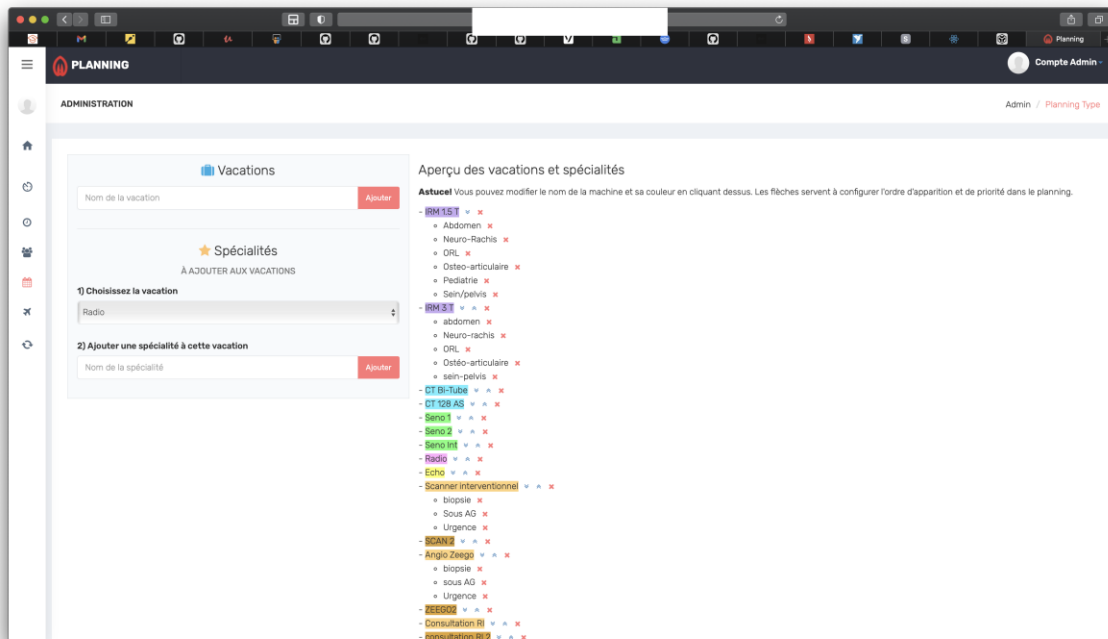

This is the sidebar.

This is the first page of the Settings Menu.

The left component is used by the admin to create a new schedule by selecting the month and the year.

The little table component in the middle of the screen, is all the available schedules, and you can edit them, delete them, or set them to active or inactive.

The right component is a basic component to allow or not the entire schedule view for a user. In this project the user can only see is schedule, if you click on this option, everybody while see the schedule of others.
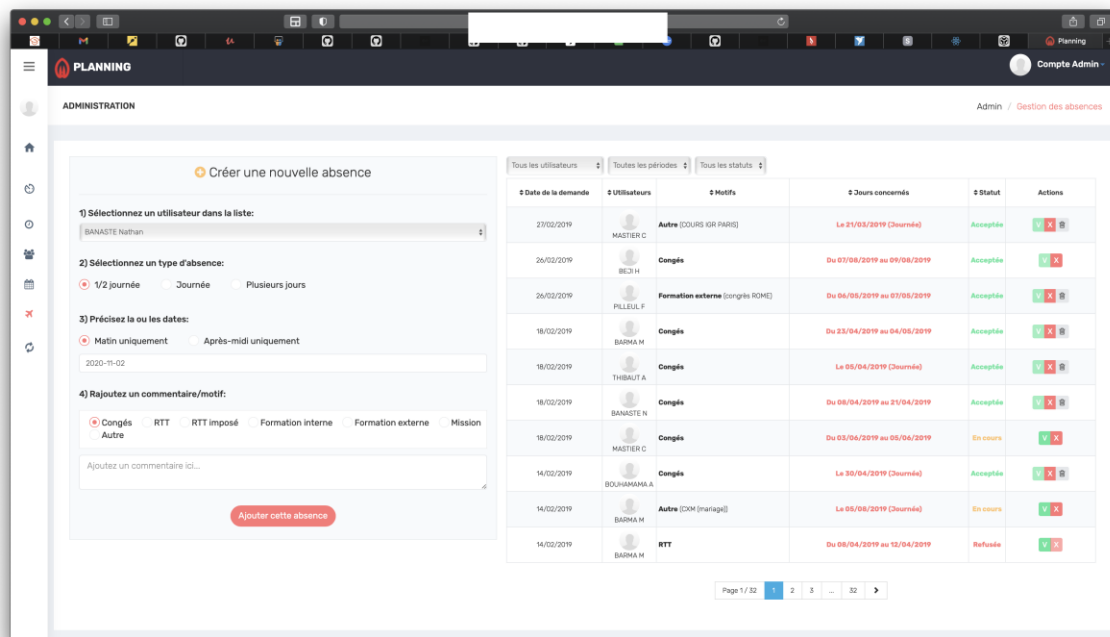

This is the third page of the Settings Menu.

The left component is used by the admin to create a new session. He can also add a specialty to this session. We can see all the sessions on the right with their specialties.

Under the session's components there is the typical schedule: the first one is for the even weeks and the second one for the odd weeks. For the columns name you just need to copy them.

And you can also print both with the small button next to the title "*Planning Type*".

This is the fourth page of the Settings Menu.

Admin can create holidays for a user by selecting the username first, then selecting the type of absence (half-day, full day, several days):

- In the case the admin chooses half-day: he needs to specify if it's in the morning or in the afternoon, a date and a reason (by default the date is the same day).
- In the case the admin chooses full day: he needs to specify the date and the reason (by default the date is the same day).
- In the case the admin chooses several days: he needs to specify the starting date and the end date, then the reason (by default the date is the same day).

The right component is a table that resumes all the demands of holidays made by the users. The admin can create one for a specific user. The admin can see the date of the demand / the user who asked / the reason / the concerned days / the status (accepted, in progress, refused). The admin as 3 types of actions, he can approve, deny or delete the demand.

Half-Day Example.

Full Day Example.

Several Days Example.

This is the last page of the Sidebar Menu. (Generate)

You can choose the schedule that you want to generate. *Example: April 2019*.
